

Don't let the failures of AM and FM radio capabilities limit the reach of Satellite radio. Since purchasing my satellite radio 3 weeks ago, I receive clear, concise information without the interference or static normally affecting AM radio service in my area. FM is clear but doesn't provide the information I need. If I had to rely on AM or FM radio for clear information about weather or traffic circumstances, I'd waste time, fuel, and blood pressure medicine! Satellite radio is a viable, alternate choice for the listening public. That's the point: It's a choice I made for my own benefit. Each of us has that choice; some will take the Satellite route - some will not. Don't remove this option - to receive local traffic and weather information. Let the market make that determination.
